

Partition Stops

dahl Part #	Description	Box/Master
-------------	-------------	------------

E2310-442008

1/2 Female Solder x 1/2 Female Solder

12/72

The dahl Partition Stop is a top quality shut-off valve for isolating the water supply to each unit in multi-residential buildings.

- Compact wall plates make installations more flexible in tight spaces, and more subtle in exposed locations, than large access boxes or access covers
- No need to dis-assemble the valves before soldering - simply leave them in the open position
- The zero maintenance spring-loaded self-adjusting packing system means no callbacks
- Replacement assemblies (cartridges) are available. dahl's globe valve assemblies for both plumbing and heating valves fit all models from 1965 to present.
- Fully transferable Lifetime Limited Warranty for the life of the installation.
- Working pressure 250 PSI/250°F (150 WSP)
